Imputed Share by Country

Country	Any Imputed Share	CPI Imputed Share	FX Imputed Share	Money Imputed Share	GDP Imputed Share
Afghanistan	73.85%	69.23%	1.54%	72.31%	64.62%
Albania	31.82%	25.00%	27.27%	31.82%	
Algeria	15.38%	15.38%	1.54%	7.69%	1.54%
American Samoa	69.23%		1.54%		69.23%
Andorra	94.44%		94.44%		
Angola	55.38%	47.69%	1.54%	55.38%	32.31%
Antigua and Barbuda	60.00%	60.00%	1.54%	27.69%	27.69%
Argentina	6.15%		6.15%	1.54%	1.54%
Armenia	8.82%	8.82%	8.82%	5.88%	
Aruba	17.50%	12.50%	5.00%	5.00%	7.50%
Australia	1.54%		1.54%	1.54%	1.54%
Austria	1.54%		1.54%		1.54%
Azerbaijan	5.88%	2.94%	5.88%	5.88%	
Bahamas, The	15.38%	10.77%	1.54%	15.38%	1.54%
Total	27.36%	19.31%	3.71%	12.21%	12.41%

Risk Index Construction

Inputs

- CPI annual inflation (%)
- Exchange rate change vs USD (% YoY)
- Money supply as % of GDP and its % YoY change
- Real GDP growth (%)

Transformations & outliers

- CPI, FX change and money-supply growth are highly skewed.
- We apply a $\log(1 + x)$ transform and winsorize each year at the 1st–99th percentiles.
- GDP growth is only winsorized (no log) because its distribution is more symmetric.

Standardisation & weighting

- For each year we compute z-scores of the winsorized indicators.
- Higher z-scores in CPI, FX and Money imply higher inflation risk.
- GDP z-scores are inverted so that weak growth increases vulnerability.
- Composite index = $0.40 \cdot \text{CPI} + 0.25 \cdot \text{FX} + 0.20 \cdot \text{Money} + 0.15 \cdot (-\text{GDP})$.

Scaling & risk categories

- The index is min–max scaled to a 0–100 Risk Score within each year.
- 100 = riskiest country in that year; mid-range economies usually sit around 40–60.
- Risk Score is split into Low / Medium / High using the 33rd and 66th percentiles across all observations.

Missing data & imputation policy

- Short gaps (up to 2 years) are linearly interpolated within each country and then forward-/back-filled.
- Longer gaps and entire missing series remain blank.
- The ***_filled_from_na** flags and the data-quality charts on this page show how much the index relies on imputed values.
